My dear Dr. Manville:

I am writing to get further information with reference to your work on the nutritional value of apples. I have copy of the December issue of Better Fruits in which a very interesting and scholastic article on this subject appears. I am wondering if there is anything more than what is published in this December issue. If so and available, I will be very happy to get what you have.

Very truly yours,

G. W. Carver

My dear Dr. Manville:

I want to thank you most sincerely for the information that you sent me. Nothing has come to my desk recently of greater interest. You certainly have done some most remarkable work, and work that has a greater significance than most of us can see at the present time.

Again thanking you for the very unusual information, I am

Very truly yours,

G. W. Carver

My esteemed friend, Dr. Manville:

I wish you knew how grateful I am for your letter and the enclosures. They mean so much more to me than I can possibly express, as you are hitting the very base of life in a way which I feel that the Great Creator has intended.

Along with your quotation from Revelations which is so applicable, add the 29th verse of the first Chapter of Genesis, wherein it says: "Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for meat." I think that if you put the two together along with some others it will take your point in exactly.

We are out of the apple section here. Very few apples are raised in Alabama; practically none in this section. The few that we do raise are of inferior types. I shall see if I can get in touch with any of the things that you need, as a person doing such magnificent work as you, deserves the cooperation of everyone and I shall be very happy if I can assist you in any way. You are opening up new vistas of untold value. In fact, I believe what you are doing ranks along with the work of Pasteur.

I thank you very much for the complimentary things you say about the work that I am attempting to do. Mine naturally does not compare with yours in value.

Very sincerely yours,

G. W. Carver

My esteemed friend, Dr. Manville:

Thank you so much for your Christmas greetings. No message has come to me that has cheered me more than this of yours.

I am so glad that you are having such success along the lines of the work which is so notable and so outstanding. What a fine thing for you to get the grant of \$500.00 from the American Medical Association. You have done, and are doing such a wonderful work for humanity -- a work that cannot be measured by dollars and cents. It is a truly great contribution to science.

I have received the literature which you sent me. It is most remarkable and informing, and during the ~~Holidays~~ I am going to have time to peruse it with much more thoroughness than I have right now. This is really just the information that I wanted, and the way you have gone about it shows that of a master. I am very sure that as the years come and go you will add new facts to these remarkable investigations, which you set forth so beautifully and clearly. Again, thanking you and congratulating you upon this remarkable work, I am

Yours very sincerely,

G. W. Carver, Director
Agricultural Research and
Experiment Station
